Shindo Solar Hub

Phone charging, airtime and printing powered by the sun, right inside Hagadera Camp

Pitch deck by Shindo · Hagadera Camp, Dadaab, Kenya

Problem

- Phones are a lifeline: family contact, mobile money, school and job news
- Charging points are few, far away and crowded
- Prices are high and power is unreliable
- Printing and photocopying for school forms and CVs is hard to find

Solution

A small solar-powered kiosk in my own block where neighbours can charge phones, buy airtime and print documents, close to home and safe for women and girls.

Product

Charge

Multi-port solar charging station. Pay per charge, no fuel or grid needed.

Connect

Airtime and data bundles, plus mobile money agent services once registered.

Print

Printing and photocopying for CVs, school forms and applications.

Market

- Households in my block and nearby blocks: about 150 households
- Students and young job seekers: about 200
- Small traders and volunteers who need charged phones: about 50
- Estimates for my block and nearby blocks, to be confirmed with a household count

Business Model

- Charging fee: KES 20 per charge
- Airtime and mobile money commission: 5 % on sales
- Printing: KES 10 per page
- Costs: solar and battery upkeep, paper and ink, helper wages (about KES 11,500 a month)

Traction

- I live in Hagadera and face the charging queues myself
- Next: survey 20 neighbours on their charging needs and what they would pay
- Then: a 4-week pilot with one panel and one charging station

Competition

Market charging shops

Far away, long queues, only charging.

Generators

Noisy, need fuel, costly to run.

Shindo Solar Hub

Close to home, clean solar power, three services in one place.

Go-to-Market

- Launch with a pilot in my own block
- Word of mouth through neighbours, school and youth groups
- Loyalty card: every 10th charge is free
- Grow to a second kiosk once the first one is profitable

Team

Shindo

Founder. Lives in Hagadera, knows the customers and runs daily operations.

Family helper

Family member or friend who runs the kiosk and handles cash.

PLP mentor

PLP coach or community leader who gives guidance.

Financials

Start-up item	Cost
Solar panel and battery	KES 35,000
Charging station	KES 8,000
Printer and supplies	KES 20,000
Airtime float	KES 5,000
Total start-up	KES 68,000
Break-even	about 15 customers a day

The Ask

- Seeking KES 70,000 as a start-up grant or small loan
- Use: solar kit, charging station, printer, airtime float
- Impact: income for me, jobs for 2 youth, and better phone access for about 150 households
